

About

iLogis is a state-of-art software solution for Freight Forwarders, Consolidators and NVOCCs built on web technologies. This innovative end-to-end solution covers all aspects related to sales, customer servicing, documentation, operations and operational accounting to achieve high levels of efficiency. Built-in iLogis workflow enables an organization to be more process-driven leading to a predictable and high performance business.

Key Features

1. Real-time Information

iLogis saves time and costs by eliminating the need to key-in duplicate information during the lifecycle of a Shipment. Information entered once can be pulled for use in other modules/workflows whenever required. With real-time information being made available, the organization can be agile in efficiently providing and managing its services.

2. Workflows

iLogis can be configured to define the workflows of the Organization. It ensures that each process is completed before the start of a new process. Non-conformance to a process gets escalated to the immediate line manager. This enables greater control in the business functioning within each department.

3. Template based Documents

iLogis has built-in templates to address all requirements related to documentations. These templates can be extended to suit the specific needs of an organization. iLogis supports emailing, printing or faxing of documents. One of the core features of iLogis is its handling of sophisticated and secured BL/ AWB production comprising of a multi-location document release mechanism.

4. Seamless Information Flow from Bookings

iLogis features manual and electronic bookings for containers and cargo. Booking information can seamlessly flow between all the relevant departments leading to efficient sharing of business information.

5. Configurable Pricing, Rates and Contracts

To address the constant changes to business dynamics and the subsequent commercial impact on the logistics business, iLogis has provisions for configurable templates for charges/pricing which can be based on an organisations' business logic.

6. Manage Consolidation and Stuffing

The nuances of managing the business of Consolidation demands enhanced operational efficiency. iLogis has been designed to effectively manage equipment procurement and planning of cargo stuffing, including 'Multi-City' Consolidation.

7. Control Operational Costs with Container Tracking

iLogis enhances operational efficiency by providing an "activity" based container tracking. The "activities" can be pre-defined and configured for a greater control on each business process. One of the key features of iLogis is an Integrated Container Tracking with activity-based Income and associated Expenses.

8. Seamless Receivables and Payables

iLogis enhances the business functions for all the Receivables and Payables during the course of the services being provided. Mandatory Receivables and reconciliation of Payables to Vendor Invoices can be handled seamlessly.

9. Manage Wide-ranging Operations

To manage complex and wide-ranging operations, iLogis provides for greater depth in the area of Planning, Allocation, Stuffing & De-stuffing and Discharge & Loading activities. Managing Dry Port and Vessel Port Operations that covers Door-To-Door delivery mechanism can be handled using iLogis.
